External Gadgets

Only add gadgets that you trust! Gadgets can allow unwanted or malicious code onto your web page.

[Gadget Specifications](#)[Gadget Feeds](#)

You can add gadgets from Atlassian applications like Confluence, JIRA, and others. Many public gadgets will work on a Confluence page, but some gadgets may rely on specific OpenSocial features that won't work properly in Confluence.

If you're adding gadgets from another Atlassian application, you need to either set up the other application to trust Confluence using Trusted Applications (make sure you add the '/rest' path to the allowed URL paths) or add Confluence as an OAuth Consumer to the other application.

A gadget's URL looks something like this: `http://example.com/my-gadget-location/my-gadget.xml`
